

Interstellar

By: Nasser Hafezi-Motlagh

Christopher Nolan's philosophical and adventurous Sci-fi movie; Interstellar; can astonish you not only because of its plot or its wonderful special effects but also and specially because of its combination of the mankind hard struggle to save the world with an unbelievable soundtrack (thanks to the great Hans Zimmer). Despite the low depth ocean in an eccentric planet in another galaxy, the movie, itself, can drown you in the high depth of powerful imaginations.

Consider the situation that earth has started to ruin itself, something that is quiet possible. And then in the middle of the great disappointing moments, suddenly some scientists discover that there is a wormhole in the solar system and it can be used as a portal to transfer the mankind into another galaxy. And furthermore it will be observed that this wormhole is a gift from the future race of man, dedicated to us and so, you as a weak worried species are dealing with calamity, wormhole and time travel together spontaneously. This is the big story of Cooper's (Matthew McConaughey) life in the Interstellar.

Brand (Ann Hathaway) is a woman astronaut who is companion to Cooper in an amazing spacecraft. Apparently, Brand believes in the opposite point of Cooper's rationalism. She tries to convince Cooper and the other astronauts that beside the rationalism, they need to believe in love too. Eventually the movie's story proves the Brand's idea. But actually, this was the only point in this film that I didn't like. The spacecraft travels through the wormhole and after a lot of efforts and also sacrifice; they find an appropriate planet to colonize. Cooper through his travelling along a black hole has a strange opportunity to communicate with his past and make his girl to have a quantum supervision of solving the complicated gravity equations. It is wonderful to find a classic watch as a medium of inter-universe transferring device in order to send the quantum electro-dynamic information of gravity.

No matter that you are a fan of sci-fi movies or not, and also no matter that you are a fan of movies or not, I strongly suggest this film to you. Interstellar consists of a wonderful plot plus spectacular special effects and to be honest a philosophy class, all together. This is not an opportunity that you want to lose.
